Mabyo

A guide for mabar hosts, in running order

Everything in here is something the app does not say out loud. The buttons explain themselves — these are the parts that do not.

Your players and results live on this phone only. Use the same device each week.

WHAT IS IN HERE

2 **Skill order is everything** Players

3 **Before you start** Game

4 **How the night runs** Settings · 1 of 2

5 **How players are matched** Settings · 2 of 2

6 **Running the session** Game

7 **Who is actually winning** Leaderboard

8 **Fix mistakes now, not later** History

Skill order is everything

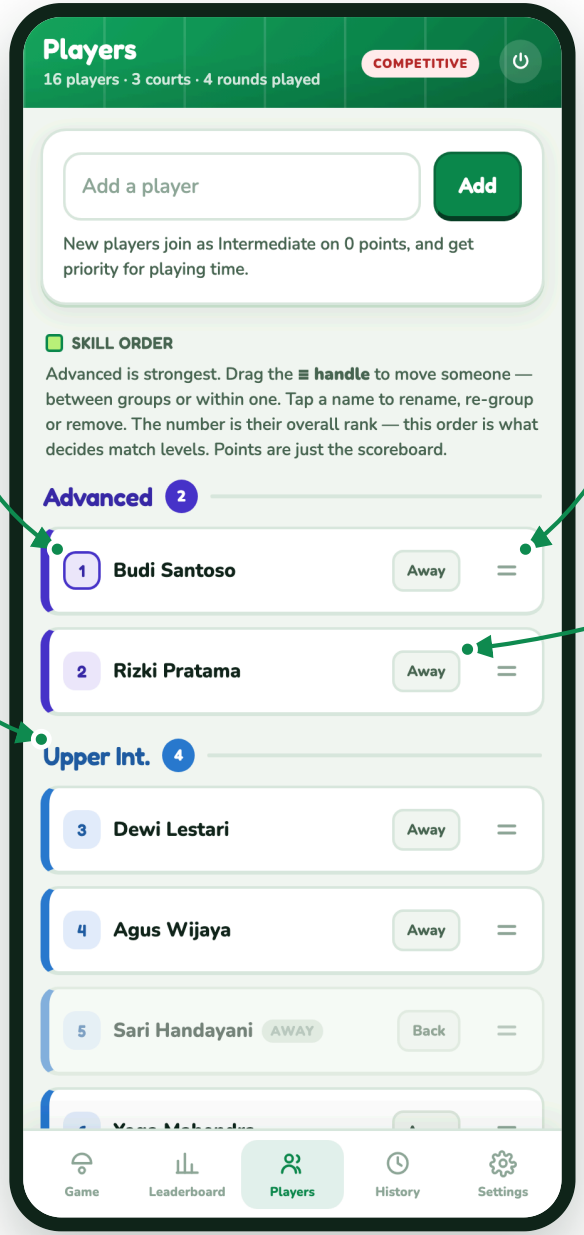

PLAYERS

The number is the ranking

Position in this list is the only thing that sets a player's level. Points scored tonight change nothing.

Drag across a heading

Dropping someone under a different group changes their level. That is how you promote or demote a player.

Press and hold to move

On a phone, hold the ≡ handle for a moment, then drag. A quick tap does nothing — that is not a bug.

Away from here too

Mark a late arrival away before you start, and bring them in with Back when they turn up.

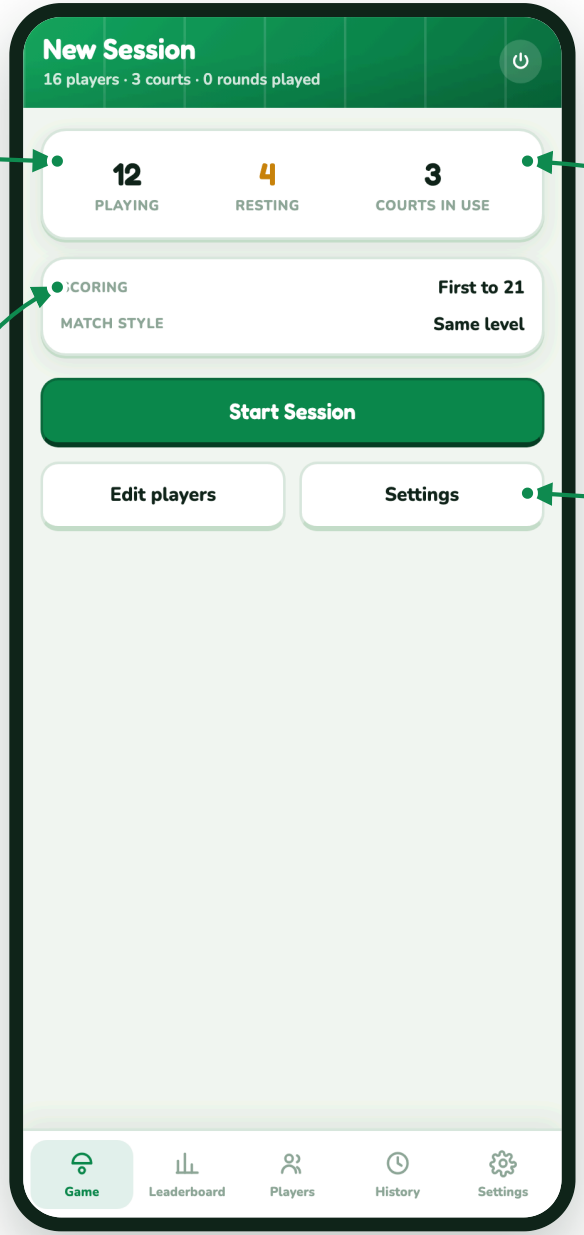

This list is the single most important thing in the app. Matchmaking reads it every time it fills a court — nothing else decides who is strong.

The split is automatic

Courts × 4 decides how many play. The rest wait, and the app rotates them in — you never choose who sits out.

A read-out, not a control

These two lines mirror your settings. Tap Settings below to change them.

Courts is a maximum

If there are not enough players for three courts, the app quietly uses two. Set it to the most you could ever use.

Two very different buttons

In Settings, “Start a new session” keeps your players and clears results. “Reset everything” erases the players too.

Add everyone first, put them in the right skill order, then press **Start Session**. You can still add, remove and reorder people later.

How the night runs

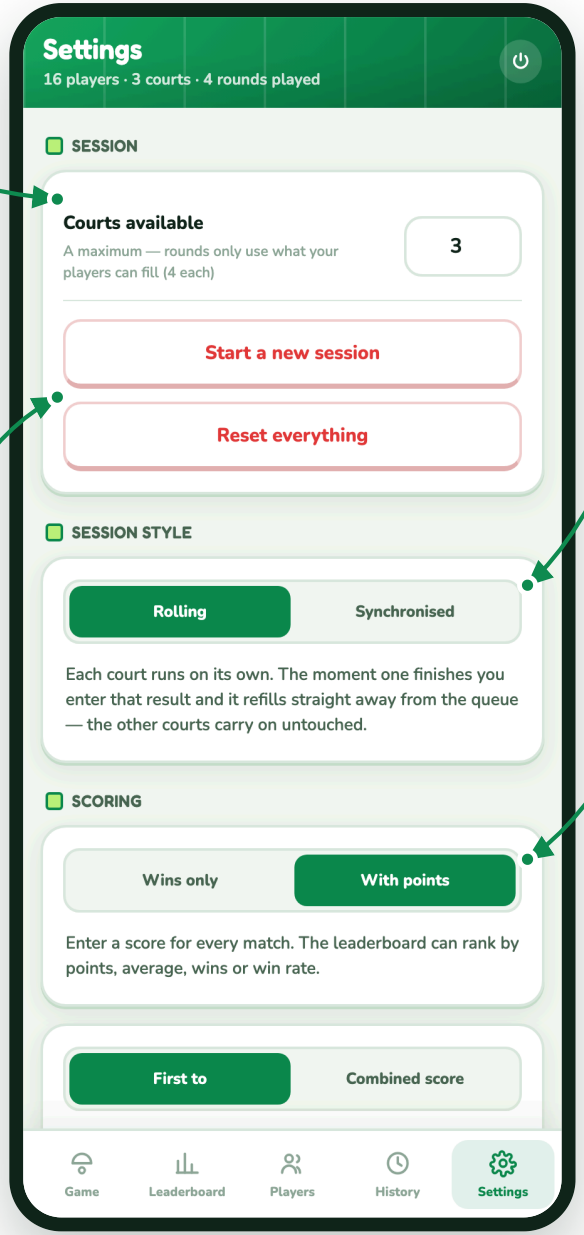

SETTINGS · 1 OF 2

A ceiling, not a target

Courts available is the most the app may use. With few players it uses fewer, by itself.

One of these erases everybody

New session keeps your players and clears tonight's results. Reset everything deletes the players too. There is no undo.

The one that matters most

Rolling: each court finishes on its own and refills immediately. Synchronised: every court waits, then all change together.

Skip the scores entirely

Wins only means you just tap the winning team — no numbers at all, and the leaderboard ranks by wins.

These three choices change the shape of the whole evening. The rest of Settings only fine-tunes them.

How players are matched

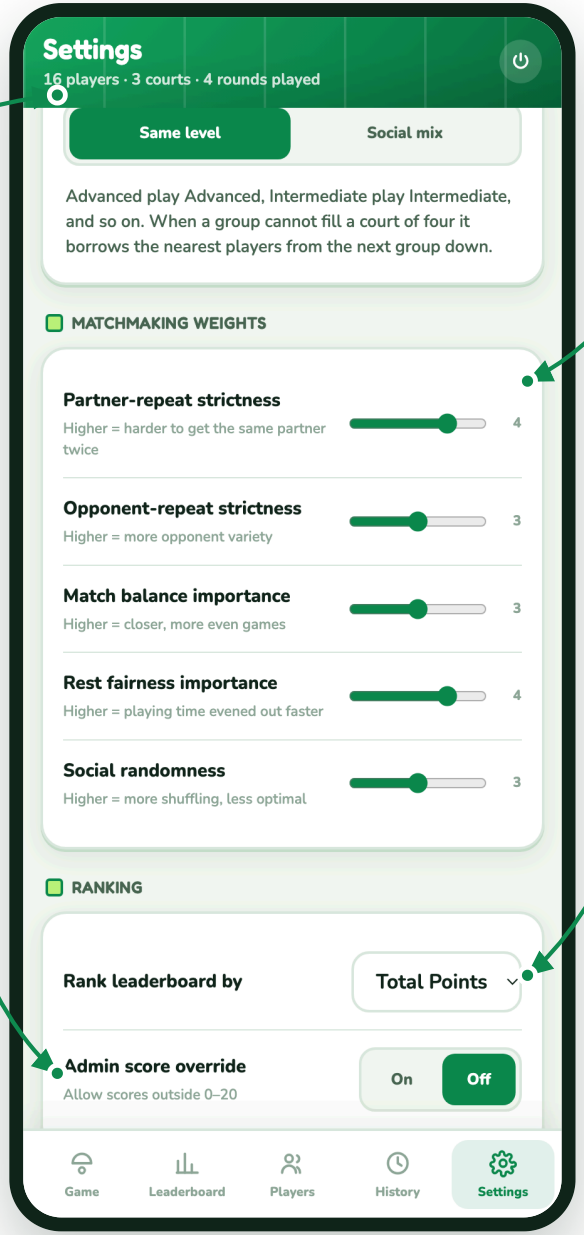

SETTINGS · 2 OF 2

Who plays whom

Same level keeps groups apart and adds the per-group leaderboards. Social mix ignores level and mixes everyone.

Scores outside 0–20

Admin score override lets you record an unusual scoreline — a walkover, or a long deuce. Leave it Off and the app guards against typos.

These pull against each other

Asking for more variety and more balance at once cannot both win. The app compromises — raise the one that matters to you.

Changes the Leaderboard

Rank by average or win rate is fairer when people have played very different numbers of games.

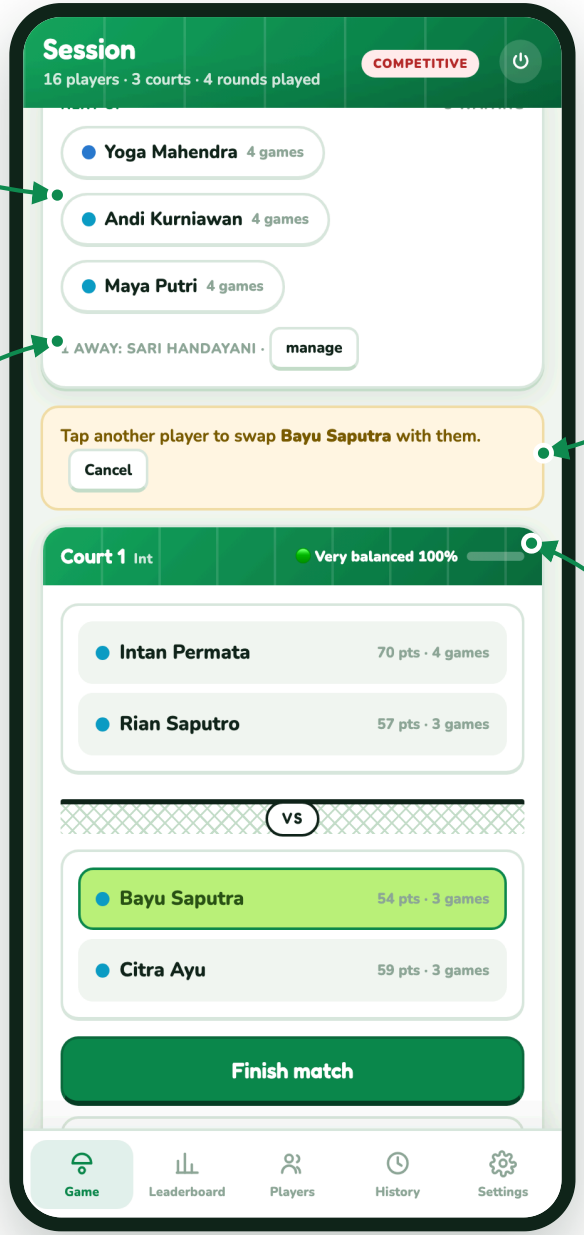

If a night feels stale, raise partner and opponent strictness. If it feels lopsided, raise match balance. Change one at a time.

… including someone waiting

With a player picked up, tap anyone in the queue and they walk straight onto the court instead.

Away is not out

An away player stops being picked, but keeps every point already scored. Tap manage to set it.

Swap any two players

Tap one player, then tap another — they trade places. The app never tells you this is possible. Use it when a pairing looks wrong.

Read the colour, not the number

Green is a close match, amber is playable, red is one-sided. Redraw the court if you do not like it.

During a match you tap two things: the team that won, then **Finish match**. The court refills itself from the queue — the other courts carry on undisturbed.

Who is actually winning

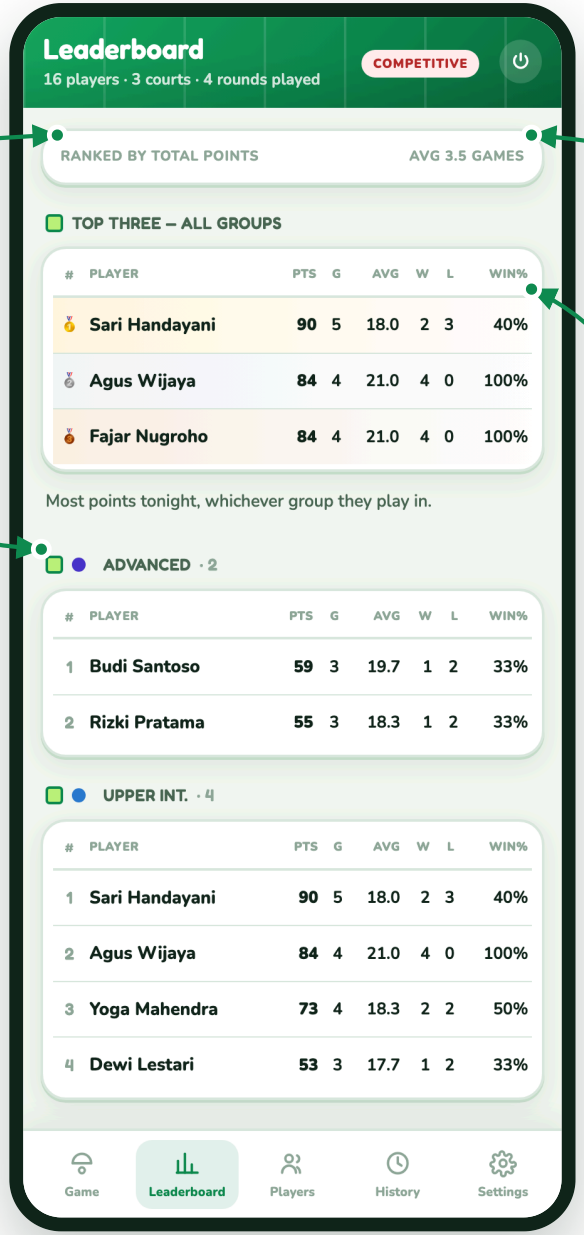

LEADERBOARD

You choose the measure

Total points is only the default. Settings can rank by average, wins or win rate instead — and the whole board reorders.

These groups need Same level

The per-group tables only appear in Same level match style. In Social mix you get one combined table.

How much to trust it

“avg 3.5 games” is the small print. Under about ten games each, the order is still mostly luck.

Top of the board ≠ best player

The app keeps giving strong players hard matches, so they win narrowly. Compare inside a group, not across the top three.

A flat leaderboard is the app working, not failing. Good matchmaking makes everyone finish close to even — the skill order on the Players page is the real ranking.

Fix mistakes now, not later

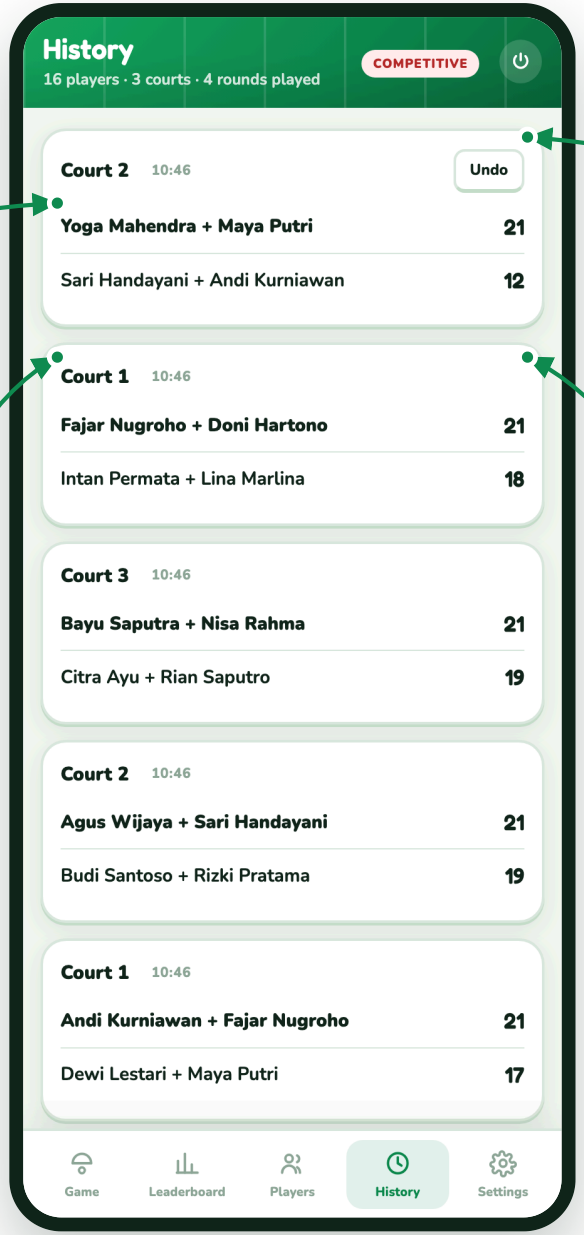

HISTORY

The winner is the bold one

Top line in dark green took the match. No tick, no label — just the weight of the text.

Undoing puts points back

The result is removed from the leaderboard as well. Nobody keeps points from a match you undid.

Only the newest can be undone

In Rolling, Undo appears on the top match alone. Get a result wrong three matches ago and it stays wrong — so fix it straight away.

Synchronised works differently

Switch to Synchronised and every past round gets an Edit button, so you can correct any of them.

Every finished match is listed newest first, with the court and the time it ended.
